

FIG. 1 is a perspective view of a rectangular block 10, which is a substrate, having a top surface 2, a bottom surface 4, and side surfaces 6. The top surface 2 is covered by a layer 3, which is a conductive layer. The bottom surface 4 is covered by a layer 4A, which is a conductive layer. The side surfaces 6 are covered by a layer 40, which is a conductive layer. The block 10 is shown in a perspective view, with dashed lines indicating the edges and corners. The block 10 is oriented such that the top surface 2 is parallel to the X-Y plane, and the bottom surface 4 is parallel to the X-Z plane. The side surfaces 6 are parallel to the Y-Z plane. The layer 3 is a thin layer, and the layer 4A is a thin layer. The layer 40 is a thin layer. The block 10 is a rectangular block, and the layers 3, 4A, and 40 are thin layers. The block 10 is a substrate, and the layers 3, 4A, and 40 are conductive layers. The block 10 is a rectangular block, and the layers 3, 4A, and 40 are thin layers. The block 10 is a substrate, and the layers 3, 4A, and 40 are conductive layers.
